

Bleach Response Grape Juice Stain

Studies were undertaken at 30°C, 40°C and 60°C to determine to bleach response for fresh stains supplied by Warwick Equest.

Results shown below are for 5cm stain circles, prepared on 100% knitted cotton, white fabric.

Wash Conditions:

- European Machine – Miele W487
- Normal wash, cotton cycle
- 3.5Kg clean ballast load
- 10g/l detergent dose
- Formulation contained 85% IECA*, and where required 10% PCS and 5% Activator

Warwick Equest Grape Juice stains show bleach response at 30°C, 40°C and 60°C compared to base detergent alone formulations. Grape Juice stains are affected by pH in the absence of bleach systems and this is evident by a decrease in stain removal when using a base detergent (IECA*) compared to water alone wash.

Response for Grape Juice

Grape Juice stains available include: Purple Grape Juice, Red Grape Juice, Black Grape Juice
